***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4-<sup>7</sup>~~5~~ and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat.

No. 4,417,638 to Harvey.

In reference to claim 4, Harvey discloses an air pallet comprising:

a board 22 having a top and a bottom; and

a plenum member 24 attached to the bottom of the board, wherein the plenum member is adapted to receive a flow of pressurized air through an intake port, the patient board having an intake port hole 28 adapted for receiving the intake port, and the plenum member further adapted to release the flow through a plurality of holes (24b) in the plenum member to provide a layer of air below the board supporting a load. With regards to the Applicant's recitation the apparatus intended for and supporting a patient, the invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

Regarding claim 5, wherein the plenum member further includes an intake port for receiving the flow of pressurized air (col. 3 lines 22-27).

17104

Art Unit: 3673

Regarding claim 7, wherein the flow of pressurized air is delivered from a blower motor through an air hose 16.

In reference to claim 8, Harvey discloses an apparatus comprising:

a board 22 having a top side and bottom; and

a plenum member 24 attached to the bottom of the board, wherein the plenum member is adapted to receive a flow of pressurized air and release the flow downwardly through a plurality of holes (24b) in the plenum member to provide a layer of air below the board supporting a load. With regards to the Applicant's recitation the apparatus intended for and supporting a patient, the invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

### ***Response to Arguments***

Applicant's arguments with respect to claims 4-5 and 7-8 have been considered but are moot in view of the new ground(s) of rejection.
